Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

FUNCTION: SECOND TRITUNCTIONAL ENZYME ACTING ON THE BETA-OXI
PATHWAY FOR FATTY ACIDS, POSSESSING HYDRATASE-DEHYDROGENASE-
EPIMERASE ACTIVITIES. CONVERTS TRANS-2-ENOYL-COA VIA D-3-
HYDROXYACYL-COA TO 3-KETOACYL-COA.
                                 PATHWAY: BETA-OXIDATION PATHWAY. SUBUNIT: MONOMER (BY SIMILARITY). SUBCELLULAR LOCATION: CATALASE-FREE DOMAIN: CONTAINS TWO SDR DOMAINS.
                       SIMILARITY: BELONGS

                                                                                            New isolated DNA which encodes viral interacting proteins - use assays to isolate products for inhibiting viral protein binding which is required for infection, replication, assembly or relea
Non-structural protein 1 interactor 1 (NSII-1) (W16329) is a human host cell protein which interacts with influenza virus protein NSI. It was identified using a yeast interactive trap system. Its amino acid sequence was deduced from NDII-1 cDNA (T63340). Another
                                                                                                                                                                                                                                                                                                                                                                                      NS11-1; non-structural protein 1 interactor 1; host cell protein; influenza virus; replication; antiviral; virucide.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              olated from Bacillus sp. IKD-5A868 strain. The protein can be expressed standard recombinant methodologies. D-arabinitol dehydrogenase is used a clinical diagnosing agent for mycosis. The present sequence presents the D-arabinitol dehydrogenase enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               8

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     host cell protein, NPI-1 (W63327), has also been identified. These host cell proteins can be used in assays to identify cpds. that interfere with the specific interaction between the viral and host cell proteins. Such cpds. can be used to treat viral infection.

The enzyme is derived from the mycelium of a Streptomyces species, especially S. clavuligerus (e.g. ATCC 27064), S. jumojensis (e.g. ATCC 29864) or S. katsurahamanus (e.g. T272). The present sequence represents the enzyme from S. clavuligerus ATCC 27064.

The enzyme is used to catalyse the biosynthesis of clavulanic acid from a precursor clavulanic acid aldehyde. The obtained clavulanic acid is in turn a key ingredient in the antibiotic Augmentin.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                      acid ester. The specification describes a method for producing a (S)-4-halo-3-hydroxybutyric acid ester. The method comprises asymmetrically reducing 4-halo-acetoacetic acid ester or its derivative with beta-ketoacyl-acyl carrier protein reductase constituting Type II fatty acid synthase, or acetoacetyl-CoA reductase constituting the polybeta-hydroxy fatty acid biosynthesis system. The novel method is used to produce optically active 4-haol-3-hydroxybutyric acid ester, with a high purity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present sequence represents a beta-ketoacyl-ACP reductase protein of Bacillus subtilis. The beta-ketoacyl-ACP reductase enzyme constitut a Type II fatty acid synthetase. The enzyme has an extremely high reducing activity and steroselectivity towards 4-chloroacetoacteic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Beta-ketoacyl-ACP reductase; Type II fatty acid synthetase; steroselectivity; 4-chloroacetoacteic acid ester; (S)-4-halo-3-hydroxybutyric acid ester; 4-halo-acetoacetic acid ester; beta-ketoacyl-acyl carrier protein reductase; acetoacetyl-CoA reductase; polybeta-hydroxy fatty acid biosynthesis; optically active;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     similar activities, carbonyl reductase shows a higher enzymatic activity when used with reduced NADH than with beta-nicotinamide adenine dinuclectide phosphate (NADPH), which is expensive and chemically unstable. The reductase has excellent stereoselectivity producing optically active (S)-4-halo-3-hydroxybutyrate ester with high optical purity and in high yield. (S) 4-halo-3-hydroxybutyrate ester is a useful drug intermediate and is also of importance in alcohol production. The present sequence is the glucose dehydrogenase protein of Bacillus subtilis. Glucose dehydrogenase is important in the regeneration of NADPH. The glucose dehydrogenase gene (A38806) was inserted into a plasmid, already carrying the carbonyl reductase gene of Kluyveromyces aesturii resulting in coexpression of the two genes from the same
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Carbonyl reductase reduces 4-haloacetoacetate ester to produce (S)-4-halo-3-hydroxybutyrate ester, using reduced beta-nicotinamide adenine dinucleotide (NADH) as an electron donor. This enzyme is useful because it has a high reductase activity for 4-chloroacetoacetate ester but does not substantially dehydrogenate any optical isomers of 4-halo-3-hydroxybutyrate ester. In comparison with other enzymes with
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Carbonyl reductase; (S)-4-halo-3-hydroxybutyrate ester; drug synthesis; reduced nicotinamide adenine dinucleotide; NADH; alcohol production; 4-haloacetoacetate ester; glucose dehydrogenase; enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      21-DEC-1998;

                                                                                                                                                                                                                                                                                       The present sequence represents the glucose dehydrogenase protein of Bacillus subtilis. The glucose dehydrogenase gene was cloned, in the course of the invention, to regenerate the reduced nicotinamide adenine dinucleotide phosphate. The specification describes a method for producing a (S)-4-halo-3-hydroxybutyric acid ester. The method comprises asymmetrically reducing 4-halo-acetoacetic acid ester or its derivative with beta-ketoacyl-acyl carrier protein reductase constituting Type II fatty acid synthase, or acetoacetyl-CoA reductase constituting the polybeta-hydroxy fatty acid biosynthesis system. The novel method is used to produce optically active 4-haol-3-hydroxybutyric acid ester, with a high purity.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         08-MAY-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The present sequence represents a multifunctional enzyme designated Fox2. Such multifunctional enzymes may be used in the method of the invention. The specification describes a method for manipulating the metabolism of a plant, and comprises expressing a heterologous gene encoding fatty acid oxidation enzymes in the cytosol or plastids other than the peroxisomes, glyoxisomes or mitochondria of the plant. The method may be used to enhance the biological production of polyhydroxyalkanoates or novel oil compositions in a transgenic plant. Plants which may be used to produce these compounds in this way include Brassicas, maize, soybean,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       A multifunctional enzyme designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         W09945122-A1
